Document Control Information

Document Title	CLC+ Core User Guideline
Project Title	CLC+ Core production and provision of complementary consultancy services
Document Author	Thomas Mathis (Cloudflight), Tanja Gasber (GeoVille), Amelie Lindmayer (GAF)
Project Owner	Tobias Langanke (EEA)
Project Manager	Tobias Langanke (EEA)
Document Code	/
Document Version	Issue 4.0
Distribution	
Date	2023-12-20

Document Approver(s) and Reviewer(s):

Name	Role	Action	Date
Tim Wiltzius (CLF)	Reviewer	Document review	2023-12-20
Johannes Vass (CLF)	Reviewer	Document review	

Document history

Revision	Date	Created by	Short description of changes
1.0	2022-04-08	CLC+ Core consortium (CLF, GV, GAF)	Initial document creation
2.0	2022-06-10	CLC+ Core consortium (CLF, GV, GAF)	Restructure of entire document, extension of Extraction chapter and Admin User section
3.0	2023-06-06	CLC+ Core consortium (CLF, GV, GAF)	Adaption of rule 3 in the current version of the CLC+ Core system
4.0	2023-12-22	CLC+ Core consortium (CLF, GV, GAF)	Update of the entire document with all newly implemented features and improvements of the system (within SC8)

1. Admin User only

In this section information is given which is relevant for **Admin Users only**. This mainly concerns the categories Organisations and Users, where the Admin User has additional rights compared to a normal System User. An important task given to the admin user is the possibility to upload a new EAGLE ontology into the system.

1.1 Organisations

This navigation menu tab provides an overview of the registered **Organisations** of the CLC+ Core system.

Organisations are taken over by default from EIONET on your first login to CLC+ Core. Organisations play an important role when you define the visibility of your Ingestion or Extraction for publishing it. The visibility can be limited to users from your organisations only or for the country of the selected Organisation. Further, the Admin User has rights to add or remove Organisations (see Figure 6-1).

As an **Admin User** your account has certain authorizations, i.e. you are able to add new Organisations.

Search function, to **search for an organisation** within the system.

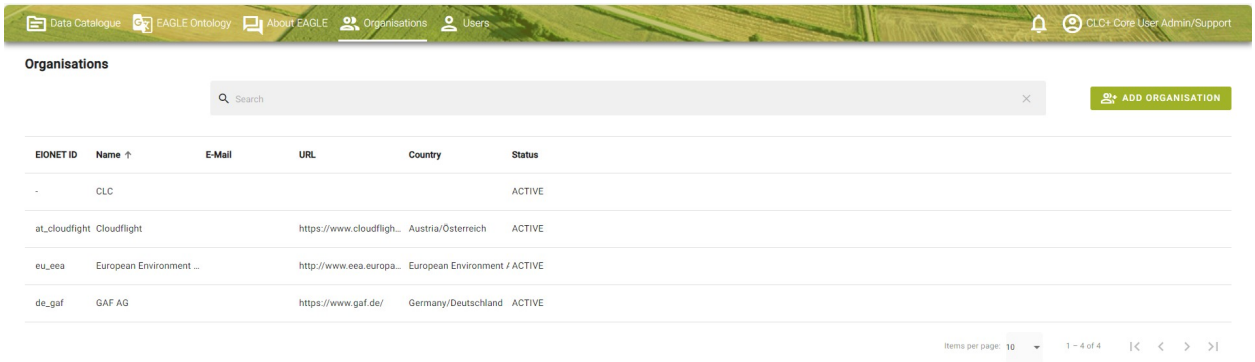

Figure 6-1: Menu item – Organisations

1.2 Users

This navigation menu tab provides an overview of the registered User of the CLC+ Core system.

Users are taken over by default from EIONET on your first login to CLC+ Core. Depending on your role assigned, you have more or less rights. The Admin User has rights to add or remove Users from the system or change their status. To open your Profile, click on your name (see Figure 6-2). Now you will be forwarded to the Profile view (section 1.5.1 in User Manual).

As an Admin User your account has certain authorizations, i.e. you are able to add new Users.

Further, you have the possibility to **search for a User.**

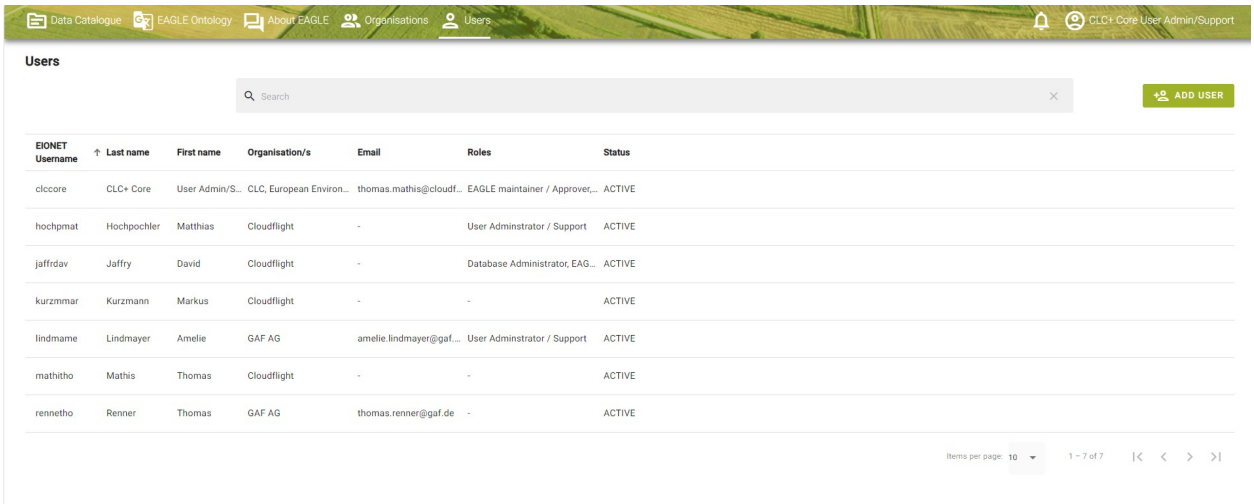

Figure 6-2: Menu item – Users.

1.2.1 User Profile

To open the **User Profile** you can either click on the User Profile Icon in the Header, which opens a context menu with the actions 'My Profile' and 'Logout' (Figure 6-3) or in the Users tab by clicking on your name (Figure 6-3). You will then be forwarded to the Profile view.

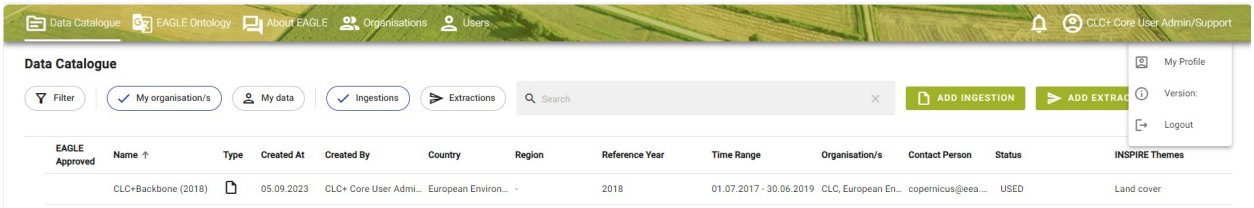

Figure 6-3: User Profile – Actions.

1.2.2 User Profile View

When you click on the context menu action 'My Profile' of the User Profile Icon you will find yourself within the User Profile view. Thus, a profile can only be changed by a person with the role 'User Administration / support'. Within your Profile you can see several information (see Figure 6-4) such as:

General Information: In this area the most important information from your user profile is shown which is username, first and last name, which organisation you are part of and your current status. The EIONET button guides you to the Eionet Portal.

Roles: In this area it is displayed what roles are assigned to you. Roles define what you as a user are allowed to do within the CLC+ Core system from a functional point of view. Typically, roles are for only Users which administer the application.

As an Admin User can deactivated by a person with the role 'User Administration / support'. "Inactive" Users do not have access to the application.

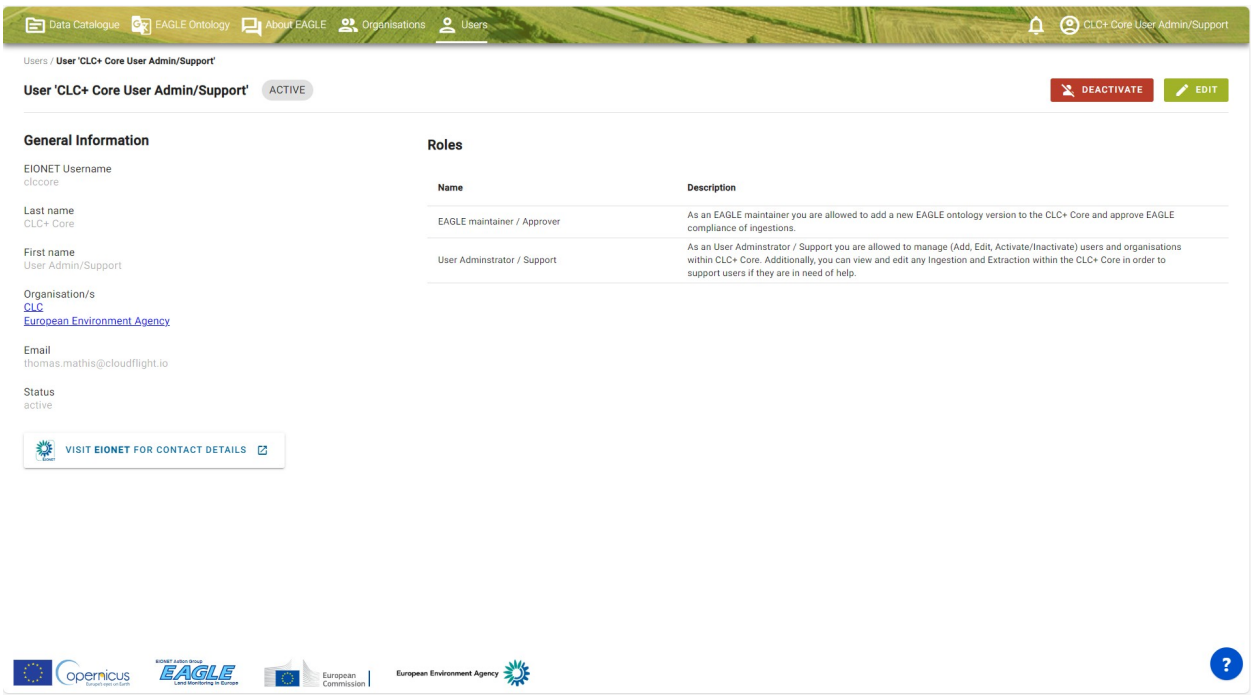

Figure 6-4: View User Profile (User Administrator).

1.2.3 Edit User Profile

Editing your profile will only affect / edit the user profile in the CLC+ Core system and not the EIONET account. **General:** Changing your first- and last name and the organisation can only be done by a person with the role 'User Administration / support'.

Roles can only be changed by a person with the role 'User Administration / support'.

By clicking on 'Save' your entered information will be saved. If you do not want to save the changed information, then you have the possibility to click on 'Cancel' (see Figure 6-5).

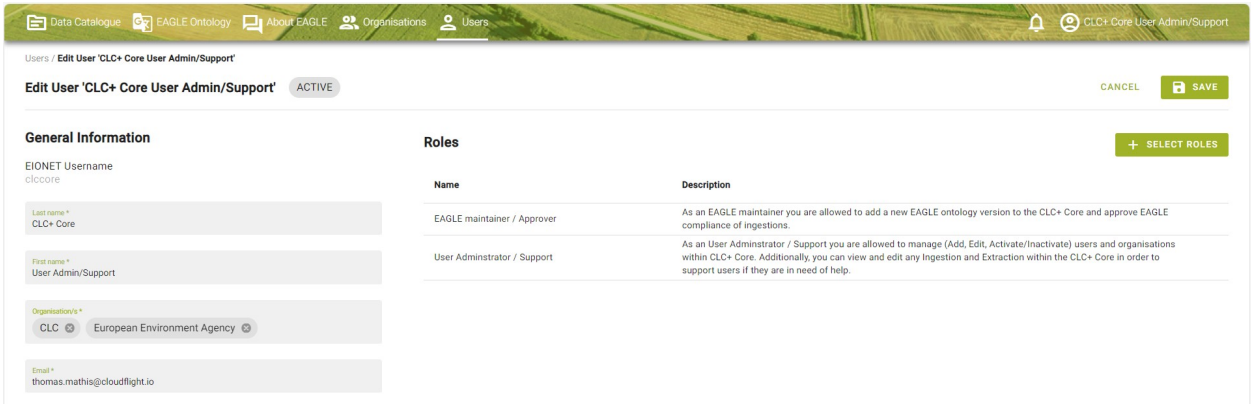

Figure 6-5: Edit User Profile.

1.3 Add / upload new EAGLE Ontology

In the "**Add new version**" dialog a call is made to the EIONET data dictionary. This feature is for expert user only. The dictionary is immediately compared to the previous version and differences will be updated. For example, as in the figure below, there are no differences, which is why you get this view (Figure 6-6).

By clicking on the **EIONET Data Dictionary** link you will be redirected to the EIONET data dictionary. Data Dictionary[1] holds definitions of datasets, tables and data elements (see Figure 6-7). Each of these three levels is defined by a set of attributes, the core set of which corresponds to ISO 11179 standard for describing data elements. The whole attribute set is flexible, and attributes can be added / removed from/to the system.

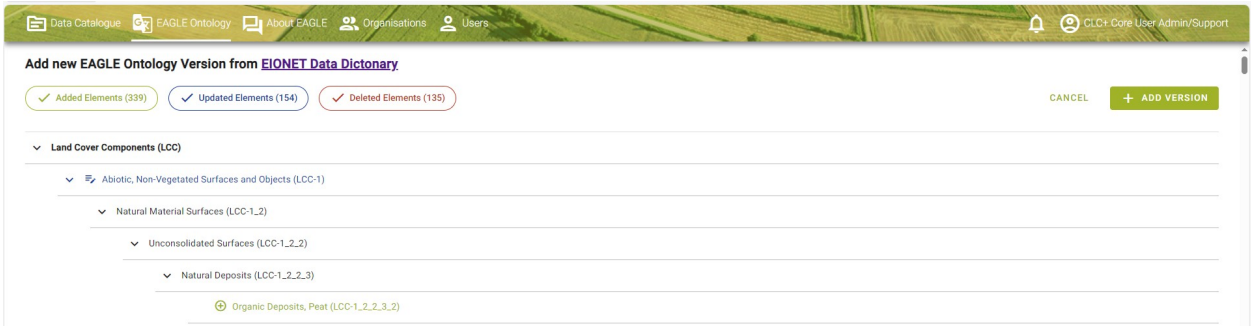

Figure 6-6: Add new EAGLE Ontology Version.

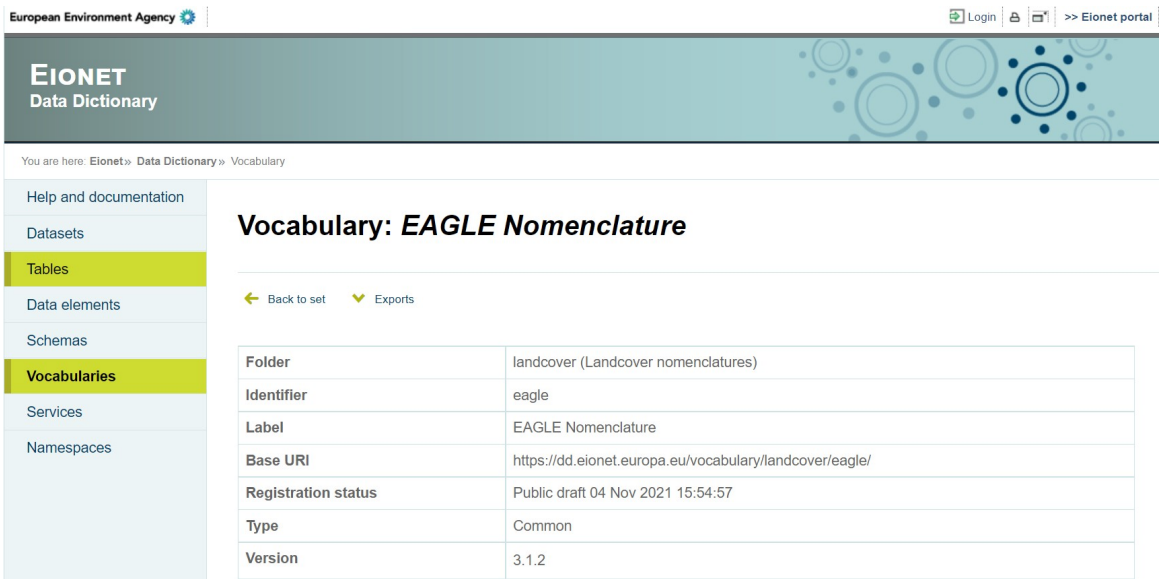

Figure 6-7: EIONET data dictionary.

Once a new EAGLE ontology version is published all users get a notification (see section 1.7.3 in User Manual).

1.4 Approval EAGLE barcoding

The EAGLE barcoding of an Ingestion can be approved for being **EAGLE compliant** by any user with the additional role of being an "EAGLE Maintainer/Approver". When opening an Ingestion, the button "Approve EAGLE Compliance" can only by seen by users with that role (see Figure 6-8). The User gets notified once the EAGLE barcoding for the Ingestion is approved by an EAGLE Maintainer.

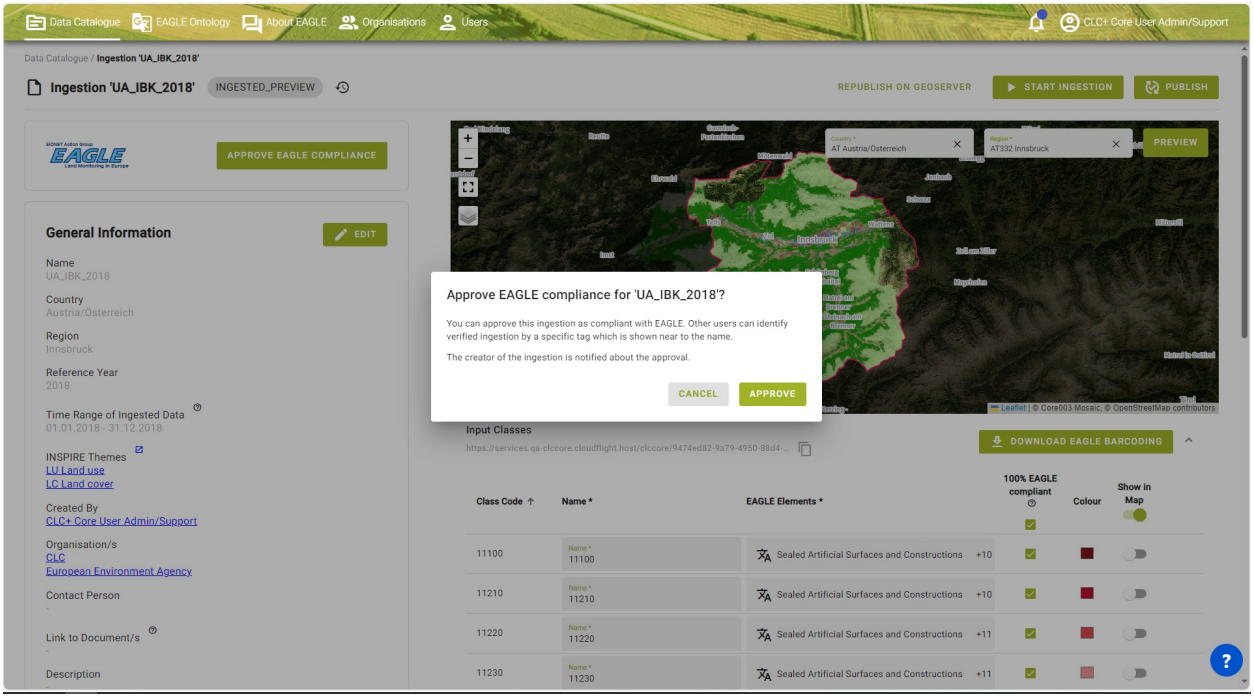

Figure 6-8:Approval of EAGLE compliance for an Ingestion.

The Ingestion gets than a quality stamp in the Data Catalogue (first column) and when opening the Ingestion next to the status. Please note that for now it is only planned to go through the approval process for the CLMS products.

The **EAGLE approval** for an Ingestion can also be revoked again by the EAGLE Maintainer (see Figure 6-9). Each approval change is saved and displayed in the history of an Ingestion.

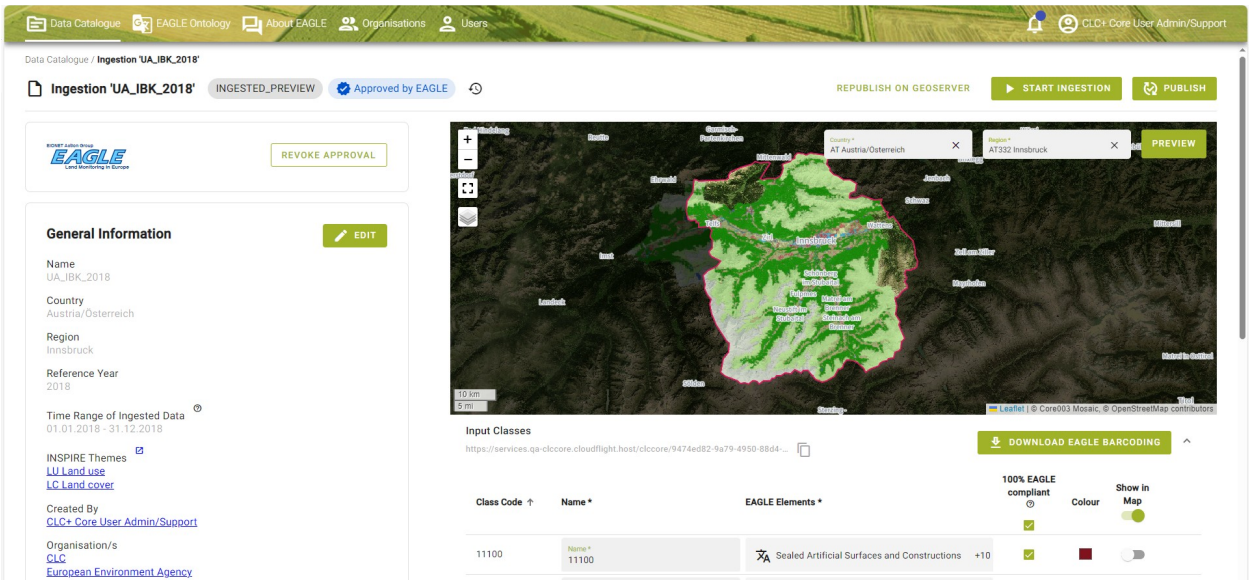

Figure 6-9:Approval and possibility to revoke the EAGLE approval again.

2. List of abbreviations

Abbreviation	Name	Reference
