This report tracks the migration of CLMS products from the land.copernicus.eu portfolio to the [Copernicus Data Space Ecosystem \(CDSE\)](#). It is updated weekly.

1. Summary

Metric	Value
CLMS Portfolio	236 datasets / 39 groups
CDSE S3 Ingestion	144 dataset IDs
CDSE OData Products	8,060,310
Datasets ingested on CDSE	138
Groups fully ingested	19
Groups partially ingested	5
Groups not yet on CDSE	15

2. Per-Group Ingestion Status

3. Scope Breakdown

3.1 Global Products

Products with worldwide coverage — bio-geophysical variables (temperature, water, snow, vegetation, energy fluxes), land cover (Dynamic Land Cover, Water Extent), and vegetation parameters.

15/18 groups have datasets on CDSE.

3.2 Pan-European Products

Products covering the EEA39 region (Europe) — high-resolution land cover, land use, forest, grassland, and imperviousness layers, thematic products (CLC, CLC+, EU-Hydro, EGMS, Image Mosaic), and vegetation seasonal trajectories.

8/17 groups have datasets on CDSE.

3.3 Priority Area Products

Local-scale monitoring products covering specific areas of interest (urban, coastal, riparian, protected areas, hot spots).

1/4 groups have datasets on CDSE.

4. Services

CLMS data on CDSE is available through the following services:

- [S3](#)
- [OData](#)
- [STAC](#)
- [OpenEO](#)
- [Sentinel Hub](#)
- [Docs](#)

5. Methodology

This report is generated by a weekly scraper that:

1. **Fetches the [land.copernicus.eu](#) portfolio** — all 249 datasets across 39 product groups via the Plone REST API.
2. **Crawls the CDSE CSV catalogue** — discovers dataset IDs available on S3 under [bio-geophysical](#), [landcover_landuse](#), and [land_cover_use_in_priority_areas](#).
3. **Queries the CDSE OData API** — total CLMS product count.
4. **Cross-references** — maps CDSE dataset IDs to land portal product groups and reports ingestion status per group.
